DETAILED ACTION

1. This office action is in response to BPAI decision, Examiner Affirmed in Part, of 09/22/2010.

This office action is in response to Applicant's submission of Amendment filed on 2/28/2011, which is further in response to BPAI decision, Examiner Affirmed in Part, of 09/22/2010.

2. Claims **3, 5, 10, and 18** have been cancelled in the amendment of 2/28/2011. Applicant presents claims **1-2, 4, 6-9, 11-17, and 19-26** for examination.

Reasons for Allowance

3. The following is a statement of reason for the indication of allowance:

Applicant has amended the claims to place the application in condition for allowance as a result of the decision of the Board of Appeals wherein claims 3,5, 9,10, 17 and 18 were reversed .

Applicant has amended independent claim 1 to incorporate the subject matter of claims 3 and 5, now cancelled. Claim 9 was rewritten in independent form to include the subject matter of claim 1, as well as subject matter of claim 10, now cancelled. Claim 17 was also rewritten in independent form to include the subject matter of claim 1, as well as the subject matter of claim 18. Claim 18 has been cancelled. Claim 26 was allowed as indicated in office action mailed 05/02/2007 and affirmed by the BPAI on 09/22/2010.

The updated search found:

a) Greatline discloses that “the user interface 36 includes a touch screen user input portion 36b. The details of one specific embodiment of the touch screen are shown in FIGS. 13A and 13B. In FIG. 13A, a typical touch screen display is shown which includes features for changing the width of the UUC symbol, and changing the magnification of the actual display shown on the screen. In addition, delay buttons allow the operator to deliberately change the delay factor as represented by the distance between the actual position symbol 62 and the predicted position symbol 63. A number of screen switch positions correspond to each of the six bins of product that can be serviced by the present invention. The operator can call up the particular layer of map corresponding to one of the six bins shown on the screen. Finally, the bottom bar on the particular display in FIG. 13A allows the operator to access a second menu for displaying the GPS data” (see specification for more details).

b) Martinez discloses that “There are boundaries between adjacent cells which define areas of potential interference. Boundary BC bisects the areas of cell B and cell C in a supercell 48. Similarly, boundary EF bisects the areas of cell E and cell F in a supercell 42; boundary CE bisects the areas of cells C and E; and boundary BF bisects the cells B and F. The cell boundaries, such as BC, define regions in which there are potential interference paths such as those illustrated at 115 and 116. These potential interference paths mark areas of interference between satellite and terrestrial services. As illustrated in FIG. 3, earth station transmitters 50 and 52 for the satellite communication system may coexist by operating at different frequencies than the transmitters for the terrestrially based communications system 104. However, if these

Art Unit: 2617

communication systems operate at the same frequency, there may be interference between them.” (See specification for more details).

However, claims 1-2, 4, 6-9, 11-17, and 19-26 are allowed because the closest prior art, either alone or in combination, fail to anticipate or render obvious the method and mobile satellite system comprising wherein the exclusion zone and on an estimated error of the determined location, wherein the location of the UT is determined by the UT and transmitted to the GW or location of the UT is determined by the GW as in claim 1, and wherein the surface of the earth and at least one point located above the surface of the earth or a surface defined by at least two connected points on the surface of the earth and at least one point located above the surface of the earth as in claim 9, and wherein the UT is granted service if the value of E is less than CL and where the GW sets the value of CL to be one or less than a possible minimum value of E for excluding all UTs from operating within the exclusion zone or greater than a possible maximum value of E enabling all UTs to operate within the exclusion zone as in claim 9, and as in claim 26 for reasons as indicated in the office action mailed 05/02/2007, as defined in the specification, in combination with all other limitations in the claim(s) as defined by applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JULIO PEREZ whose telephone number is (571)272-7846. The examiner can normally be reached on 10-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, PATRICK EDOUARD can be reached on (571)272-7603. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
